

AeroNOTAM

AeroNOTAM gives you easy and fast access to NOTAMs worldwide. It features offline data-management, multiple list views, map view, notifications, and filters.

You can bookmark NOTAMs for later reference and share them by mail, message, or social media sites.

NOTAMs are organized as routes either by flightpath (arrival/departure airport), an airport with radius, or just as a simple list of your most used airports. Appropriate FIRs will be added automatically.

Furthermore you can define alerts for airports and FIRs to be notified hours (between 1 and 48 hours) in advance before a NOTAM becomes effective.

AeroNOTAM Data is provided by US FAA which covers a lot of airports, however, they might not provide data for smaller airfields or local NOTAM series outside the US.

Requires iOS 8.0 or later. Compatible with iPhone, iPad, and iPod touch.

2016/1

Other Products:

AeroWeather Pro: Get current and precise weather conditions (METAR) as well as weather forecasts (TAF), which are used by pilots for their flight preparations. In addition to the Lite version it provides many more features like groups, aerodrome NOTAMs, AWOS numbers (US only), webcams, and radar imagery for selected countries.

AeroVariation: Calculates the magnetic variation based on the World Magnetic Model (WMM) for any location and year between 2015 and 2019.
