

# AeroWeather

Get current and precise weather conditions (METAR) as well as weather forecasts (TAF), which are used by pilots for their flight preparations. You can choose worldwide airport weather stations from the built-in database by either name or ICAO/IATA code. Data will be shown in its original format or fully decoded into easy understandable texts.

Displays webcams nearby airfields (provided by [www.webcams.travel](http://www.webcams.travel)), aerodrome NOTAM (provided by FAA), possibility to add own comments for each station and switch between day and nighttime display mode.

Shows you animated base-reflectivity, velocity, and precipitation radar within detail view (US coverage only), animated precipitation radar within detail view (Canadian coverage only) and displays optionally up to 12 hours of previous METAR's (raw format only). METARs/TAFs can be shared (e.g., mail) or printed.

AeroWeather Pro uses weather data from freely available US NOAA and FAA services, which cannot be guaranteed. Try out AeroWeather Lite with limited functionality for free first.

Requires iOS 6.0 or later. Compatible with iPhone, iPad, and iPod touch. Optimized for watchOS2 plus complication support (requires iOS 9.0 or later) for the modular watch face.

2016/1
